	INSERT	APPEND
TINYARRAY:	33.6	672.1
SMALLARRAY:	46.1	667.2
MEDIUMARRAY:	190.6	663.9
LARGEARRAY:	9.0977	661.8
EXTRALARGEARRAY:	881.6307	3.1432

It seems like the insert time rises as the arrays increase, once it hits largearray it jumps up to milliseconds and at extralargearray there is a pretty significant jump in time. Whereas in append it stays pretty consistent throughout regardless of size. There is a spike at the extralargearray, but it is not as significant as in insert. Append seems to scale a lot better than insert seeing how consistent it is.
